Buffered SuperTrack Notes linked to Market Vectors Gold Miners ETF

Description

Barclays issued \$110,000 of Buffered SuperTrack Notes linked to Market Vectors Gold Miners ETF on October 31, 2012 at \$1,000 per note.

These notes are Barclays-branded Buffered PLUS securities that do not pay periodic coupons, but instead pay a single amount at maturity depending on the final level of Market Vectors Gold Miners ETF's stock.

If on October 28, 2014 Market Vectors Gold Miners ETF's stock price is higher than \$51.24, but lower than \$57.13, the notes pay a return equal to the percentage increase in Market Vectors Gold Miners ETF's stock multiplied by 2.0, up to a cap of 23.00%. If on October 28, 2014 the refe is below \$51.24 but not below \$43.55, investors receive \$1,000 face value per note. If Market Vectors Gold Miners ETF's stock price on October 28, 2014 is lower than \$43.55, investors receive face value per note reduced by the amount the reference asset is below \$43.55 as a percent of the initial level, \$51.24.

Valuation

This product can be valued as a combination of a note from Barclays, one short out-of-the-money put option, two long at-the-money call options, and two short out-of-the-money call options. For reasonable valuation inputs this note was worth \$947.23 when it was issued on October 31, 2012 because the value of the options investors gave Barclays plus the interest investors would have received on Barclays's straight debt was worth \$52.77 more than the options investors received from Barclays.

There is no active secondary market for most structured products. Structured products, including this note, therefore are much less liquid than simple stocks, bonds, notes and mutual funds. Investors are likely to receive less than the structured product's estimated market value if they try to sell the structured product prior to maturity. Our valuations do not incorporate this relative lack of liquidity and therefore should be considered an upper bound on the value of the structured product.

Payoff Curve at Maturity

The payoff diagram shows the final payoff of this note given Market Vectors Gold Miners ETF's stock price (horizontal axis). For comparison, the dashed line shows the payoff if you invested in Market Vectors Gold Miners ETF's stock directly.

Principal Payback Table

Market Vectors Gold Miners ETF's Stock	Note Payoff
\$0.00	\$150.00
\$5.12	\$250.00
\$10.25	\$350.00
\$15.37	\$450.00
\$20.50	\$550.00
\$25.62	\$650.00
\$30.74	\$750.00
\$35.87	\$850.00
\$40.99	\$950.00
\$46.12	\$1,000.00
\$51.24	\$1,000.00
\$56.36	\$1,200.00
\$61.49	\$1,230.00
\$66.61	\$1,230.00
\$71.74	\$1,230.00
\$76.86	\$1,230.00

Maturity Payoff Diagram

The contingent payoffs of this Buffered SuperTrack Note.

Analysis

This Buffered SuperTrack Note pays investors the increase in Market Vectors Gold Miners ETF's stock multiplied by 2.0 capped at 23.00%, but if Market Vectors Gold Miners ETF's stock declines over the term of the note, investors will suffer losses equal to the percentage decline in Market Vectors Gold Miners ETF's stock. In addition, investors bear the credit risk of Barclays. Investors purchasing this Buffered SuperTrack Note effectively sell at-the-money put and out-of-the-money call options to Barclays, buy at-the-money call options, and a zero-coupon note from Barclays. This Buffered SuperTrack Note is fairly priced if and only if the market value of the options investors received from Barclays equals the market value of the options investors gave Barclays plus the interest investors would have received on Barclays's straight debt.

Barclays's Stock Price

The graph above shows the adjusted closing price of the issuer Barclays for the past several years. The stock price of the issuer is an indication of the financial strength of Barclays. The adjusted price shown above incorporates any stock split, reverse stock split, etc.

Barclays's CDS Rate

Credit default swap (CDS) rates are the market price that investors require to bear credit risk of an issuer such as Barclays. CDS rates are usually given in basis points (bps). One basis point equals 0.01%. Higher CDS rates reflect higher perceived credit risk, higher required yields, and therefore lower market value of Barclays's debt, including outstanding Buffered SuperTrack Note. Fluctuations in Barclays's CDS rate impact the market value of the notes in the secondary market.

Market Vectors Gold Miners ETF's Stock Price

The graph above shows the historical levels of Market Vectors Gold Miners ETF's stock for the past several years. The final payoff of this note is determined by Market Vectors Gold Miners ETF's stock price at maturity. Higher fluctuations in Market Vectors Gold Miners ETF's stock price correspond to a greater uncertainty in the final payout of this Buffered SuperTrack Note.

Realized Payoff

This product will mature on October 31, 2014.

Reference Asset Market Vectors Gold Miners ETF's Stock's Implied Volatility

The annualized implied volatility of Market Vectors Gold Miners ETF's stock on October 26, 2012 was 35.22%, meaning that options contracts on Market Vectors Gold Miners ETF's stock were trading at prices that reflect an expected annual volatility of 35.22%. The higher the implied volatility, the larger the expected fluctuations of Market Vectors Gold Miners ETF's stock price and of the Note's market value during the life of the Notes.

Decomposition of this Buffered SuperTrack Note

This note can be decomposed into different components, and each component can be valued separately. The chart above shows the value of each component of this Buffered SuperTrack Note.

1. Delta measures the sensitivity of the price of the note to the Market Vectors Gold Miners ETF's stock price on October 26, 2012.
2. CDS rates can be considered a measure of the probability that an issuer will default over a certain period of time and the likely loss given a default. The lower the CDS rate, the lower the default probability. CDS rate is given in basis points (1 basis point equals 0.01%), and is considered as a market premium, on top of the risk-free rate, that investors require to insure against a potential default.
3. Fair price evaluation is based on the Black-Scholes model of the Market Vectors Gold Miners ETF's stock on October 26, 2012.
4. Calculated payout at maturity is only an approximation, and may differ from actual payouts at maturity.
5. Our evaluation does not include any transaction fees, broker commissions, or liquidity discounts on the notes.
