Coupon Bearing Notes linked to Whole Foods Market, Inc.

Description

Bank of America issued \$13.48 million of Coupon Bearing Notes linked to Whole Foods Market, Inc. on March 17, 2011 at \$10 per note.

These notes are Bank of America-branded single observation reverse convertibles. Single observation reverse convertibles pay periodic interest coupons and at maturity convert into shares of the reference security if the price of the reference security at the notes' maturity is below the trigger price determined when the notes were issued.

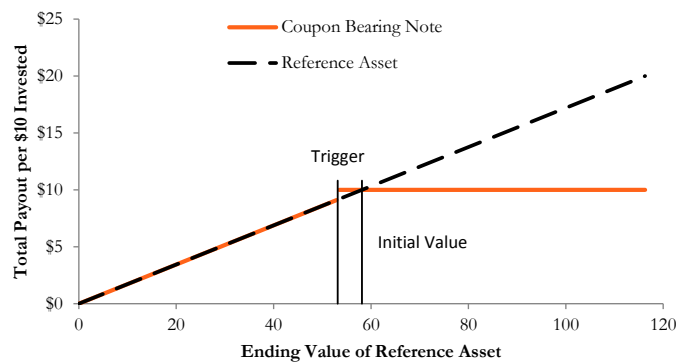

These 12-month notes pay monthly coupons at an annualized rate of 8.00%. In addition to the quarterly coupons, on March 23, 2012 investors will receive the market value of 0.17 share of Whole Foods Market, Inc.'s stock if on March 16, 2012 Whole Foods Market, Inc.'s stock closes below \$53.16 (91% of Whole Foods Market, Inc.'s stock price on March 10, 2011). Otherwise, investors will receive the \$10 face value per note.

Valuation

This Bank of America single observation reverse convertible linked to Whole Foods Market, Inc.'s stock can be valued as a combination of a note from Bank of America and a short European out-of-the-money cash-or-nothing binary put option, and a short European out-of-the-money put option on Whole Foods Market, Inc.'s stock. For reasonable valuation inputs this note was worth \$9.27 per \$10 when it was issued on March 17, 2011 because investors were effectively being paid only \$0.69 for giving Bank of America options which were worth \$1.42.

There is no active secondary market for most structured products. Structured products, including this note, therefore are much less liquid than simple stocks, bonds, notes and mutual funds. Investors are likely to receive less than the structured product's estimated market value if they try to sell the structured product prior to maturity. Our valuations do not incorporate this relative lack of liquidity and therefore should be considered an upper bound on the value of the structured product.

Payoff Curve at Maturity

The payoff diagram shows the final payoff of this note given Whole Foods Market, Inc.'s stock price (horizontal axis). For comparison, the dashed line shows the payoff if you invested in Whole Foods Market, Inc.'s stock directly.

Analysis

This single observation reverse convertible's 8.00% coupon rate is higher than the yield Bank of America paid on its straight debt but, in addition to Bank of America's credit risk, investors bear the risk that they will receive shares of Whole Foods Market, Inc.'s stock when those shares are worth substantially less than the face value of the note at maturity.

Investors purchasing these reverse convertibles effectively sell put options to Bank of America and post the note's issue price as collateral to secure satisfaction of the investors' obligations under the option contracts. Bank of America pays investors a "coupon" that is part payment for the put options and part interest on the investors' posted collateral. This reverse convertible is fairly priced if and only if the difference between the reverse convertible's "coupon rate" and interest paid on Bank of America's straight debt equals the value of the put option investors are giving to Bank of America. Whether this reverse convertible is suitable or not is identically equivalent to whether selling put options on the reference stock at the option premium being paid by Bank of America was suitable for the investor.

Bank of America's Stock Price

The graph above shows the adjusted closing price of the issuer Bank of America for the past several years. The stock price of the issuer is an indication of the financial strength of Bank of America. The adjusted price shown above incorporates any stock split, reverse stock split, etc.

Bank of America's CDS Rate

Credit default swap (CDS) rates are the market price that investors require to bear credit risk of an issuer such as Bank of America. CDS rates are usually given in basis points (bps). One basis point equals 0.01%. Higher CDS rates reflect higher perceived credit risk, higher required yields, and therefore lower market value of Bank of America's debt, including outstanding Coupon Bearing Note. Fluctuations in Bank of America's CDS rate impact the market value of the notes in the secondary market.

Whole Foods Market, Inc.'s Stock Price

The graph above shows the historical levels of Whole Foods Market, Inc.'s stock for the past several years. The final payoff of this note is determined by Whole Foods Market, Inc.'s stock price at maturity. Higher fluctuations in Whole Foods Market, Inc.'s stock price correspond to a greater uncertainty in the final payout of this Coupon Bearing Note.

Realized Payoff

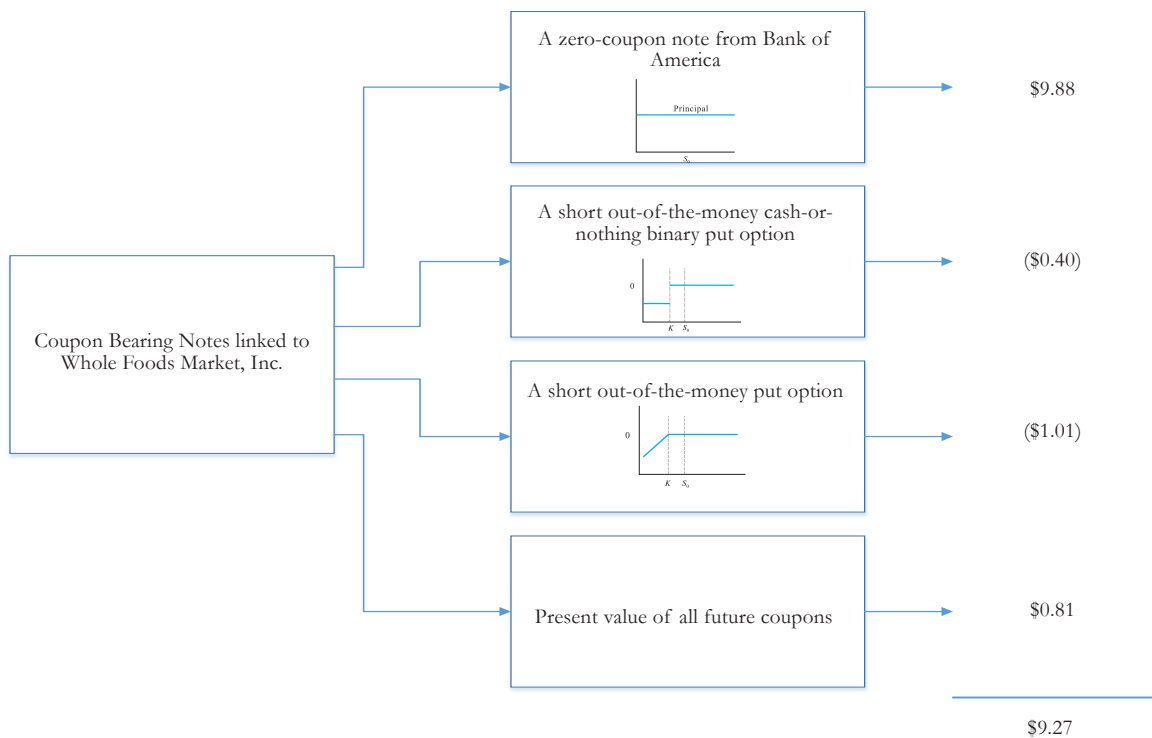

This note matured on March 23, 2012 and investors received \$10.00 per note.

Reference Asset Whole Foods Market, Inc.'s Stock's Implied Volatility

The annualized implied volatility of Whole Foods Market, Inc.'s stock on March 10, 2011 was 37.02%, meaning that options contracts on Whole Foods Market, Inc.'s stock were trading at prices that reflect an expected annual volatility of 37.02%. The higher the implied volatility, the larger the expected fluctuations of Whole Foods Market, Inc.'s stock price and of the Note's market value during the life of the Notes.

Decomposition of this Coupon Bearing Note

This note can be decomposed into different components, and each component can be valued separately. The chart above shows the value of each component of this Coupon Bearing Note.

1. Delta measures the sensitivity of the price of the note to the Whole Foods Market, Inc.'s stock price on March 10, 2011.
2. CDS rates can be considered a measure of the probability that an issuer will default over a certain period of time and the likely loss given a default. The lower the CDS rate, the lower the default probability. CDS rate is given in basis points (1 basis point equals 0.01%), and is considered as a market premium, on top of the risk-free rate, that investors require to insure against a potential default.
3. Fair price evaluation is based on the Black-Scholes model of the Whole Foods Market, Inc.'s stock on March 10, 2011.
4. Calculated payout at maturity is only an approximation, and may differ from actual payouts at maturity.
5. Our evaluation does not include any transaction fees, broker commissions, or liquidity discounts on the notes.
