Buffered SuperTrack Notes linked to Russell 2000 Index

Description

Barclays issued \$660,000 of Buffered SuperTrack Notes linked to Russell 2000 Index on April 29, 2014 at \$1,000 per note.

These notes are Barclays-branded PLUS securities that do not pay periodic coupons, but instead pay a single amount at maturity depending on the Russell 2000 Index level at maturity.

If the Russell 2000 Index level on April 25, 2016 is higher than 1,144.35, but lower than 1,389.81, the notes pay a return equal to the percentage increase in the Russell 2000 Index. If on April 25, 2016 the Russell 2000 Index level is above the 1,389.81, the notes pay the maximum payout of \$1,214.50. If on April 25, 2016 the Russell 2000 Index level is below 1,144.35, investors receive the face value per note reduced by the percentage decline in the reference asset. The notes will pay nothing at maturity if the reference asset declines to zero.

Valuation

This note can be valued as a combination of a note from Barclays, a short at-the-money put option, one long at-the-money call option, and one short out-of-the-money call option. The short at-the-money put option exposes investors to any decline in the Russell 2000 Index. The one short out-of-the-money call option has the strike price of 1,389.81, and limits the maximum return of the notes beyond the cap level. For reasonable valuation inputs this note was worth \$971.98 when it was issued on April 29, 2014 because the value of the options investors gave Barclays plus the interest investors would have received on Barclays's straight debt was worth \$28.02 more than the call options investors received from Barclays.

There is no active secondary market for most structured products. Structured products, including this note, therefore are much less liquid than simple stocks, bonds, notes and mutual funds. Investors are likely to receive less than the structured product's estimated market value if they try to sell the structured product prior to maturity. Our valuations do not incorporate this relative lack of liquidity and therefore should be considered an upper bound on the value of the structured product.

Payoff Curve at Maturity

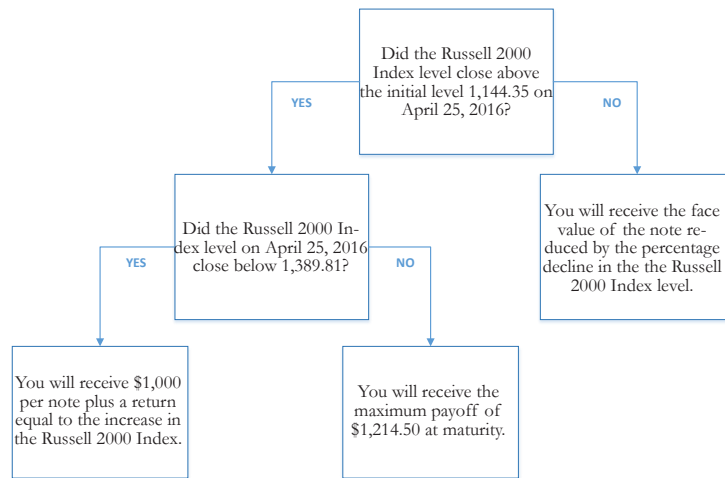

The payoff diagram shows the final payoff of this note given the Russell 2000 Index level (horizontal axis). For comparison, the dashed line shows the payoff if you invested in the Russell 2000 Index directly.

Principal Payback Table

The Russell 2000 Index	Note Payoff
0.00	\$100.00
114.44	\$200.00
228.87	\$300.00
343.31	\$400.00
457.74	\$500.00
572.18	\$600.00
686.61	\$700.00
801.05	\$800.00
915.48	\$900.00
1,029.92	\$1,000.00
1,144.35	\$1,000.00
1,258.79	\$1,100.00
1,373.22	\$1,200.00
1,487.66	\$1,214.50
1,602.09	\$1,214.50
1,716.53	\$1,214.50

Maturity Payoff Diagram

The contingent payoffs of this Buffered SuperTrack Note.

Analysis

This Buffered SuperTrack Note pays investors the increase in the Russell 2000 Index capped at 21.45%, but if the Russell 2000 Index declines over the term of the note, investors will suffer losses equal to the percentage decline in the Russell 2000 Index. In addition, investors bear the credit risk of Barclays. Investors purchasing this Buffered SuperTrack Note effectively sell at-the-money put and out-of-the-money call options to Barclays, buy at-the-money call options, and a zero-coupon note from Barclays. This Buffered SuperTrack Note is fairly priced if and only if the market value of the options investors received from Barclays equals the market value of the options investors gave Barclays plus the interest investors would have received on Barclays's straight debt.

Barclays's Stock Price

The graph above shows the adjusted closing price of the issuer Barclays for the past several years. The stock price of the issuer is an indication of the financial strength of Barclays. The adjusted price shown above incorporates any stock split, reverse stock split, etc.

Barclays's CDS Rate

Credit default swap (CDS) rates are the market price that investors require to bear credit risk of an issuer such as Barclays. CDS rates are usually given in basis points (bps). One basis point equals 0.01%. Higher CDS rates reflect higher perceived credit risk, higher required yields, and therefore lower market value of Barclays's debt, including outstanding Buffered SuperTrack Note. Fluctuations in Barclays's CDS rate impact the market value of the notes in the secondary market.

The Russell 2000 Index Level

The graph above shows the historical levels of the Russell 2000 Index for the past several years. The final payoff of this note is determined by the Russell 2000 Index level at maturity. Higher fluctuations in the Russell 2000 Index level correspond to a greater uncertainty in the final payout of this Buffered SuperTrack Note.

Realized Payoff

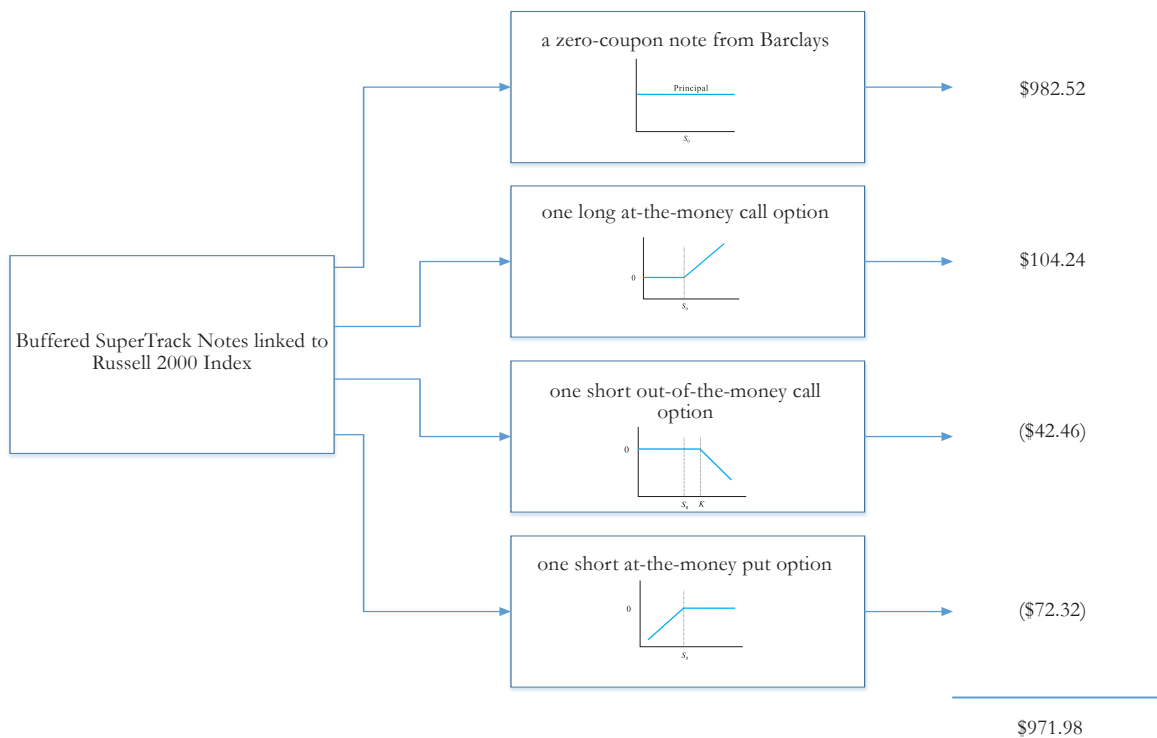

This product will mature on April 28, 2016.

Reference Asset The Russell 2000 Index's Implied Volatility

The annualized implied volatility of the Russell 2000 Index on April 24, 2014 was 20.69%, meaning that options contracts on the Russell 2000 Index were trading at prices that reflect an expected annual volatility of 20.69%. The higher the implied volatility, the larger the expected fluctuations of the Russell 2000 Index level and of the Note's market value during the life of the Notes.

Decomposition of this Buffered SuperTrack Note

This note can be decomposed into different components, and each component can be valued separately. The chart above shows the value of each component of this Buffered SuperTrack Note.

1. Delta measures the sensitivity of the price of the note to the the Russell 2000 Index level on April 24, 2014.
2. CDS rates can be considered a measure of the probability that an issuer will default over a certain period of time and the likely loss given a default. The lower the CDS rate, the lower the default probability. CDS rate is given in basis points (1 basis point equals 0.01%), and is considered as a market premium, on top of the risk-free rate, that investors require to insure against a potential default.
3. Fair price evaluation is based on the Black-Scholes model of the the Russell 2000 Index on April 24, 2014.
4. Calculated payout at maturity is only an approximation, and may differ from actual payouts at maturity.
5. Our evaluation does not include any transaction fees, broker commissions, or liquidity discounts on the notes.
