**Buffered Performance Securities linked to Dow Jones EURO STOXX 50 Index**

**Description**

Deutsche Bank issued \$3.16 million of Buffered Performance Securities linked to Dow Jones EURO STOXX 50 Index on June 30, 2014 at \$10 per note.

These notes are Deutsche Bank-branded PLUS securities that do not pay periodic coupons, but instead pay a single amount at maturity depending on the Dow Jones EURO STOXX 50 Index level at maturity.

If the Dow Jones EURO STOXX 50 Index level on June 24, 2019 is higher than 3,233.19, the notes pay a return equal to the percentage increase in the Dow Jones EURO STOXX 50 Index. If on June 24, 2019 the Dow Jones EURO STOXX 50 Index level is below 3,233.19, investors receive the face value per note reduced by the percentage decline in the reference asset. The notes will pay nothing at maturity if the reference asset declines to zero.

**Valuation**

This note can be valued as a combination of a note from Deutsche Bank, a short at-the-money put option, and one long at-the-money call option. The short at-the-money put option exposes investors to any decline in the Dow Jones EURO STOXX 50 Index. For reasonable valuation inputs this note was worth \$9.07 when it was issued on June 30, 2014 because the value of the put option investors gave Deutsche Bank plus the interest investors would have received on Deutsche Bank's straight debt was worth \$0.93 more than the call options investors received from Deutsche Bank.

There is no active secondary market for most structured products. Structured products, including this note, therefore are much less liquid than simple stocks, bonds, notes and mutual funds. Investors are likely to receive less than the structured product's estimated market value if they try to sell the structured product prior to maturity. Our valuations do not incorporate this relative lack of liquidity and therefore should be considered an upper bound on the value of the structured product.

**Payoff Curve at Maturity**

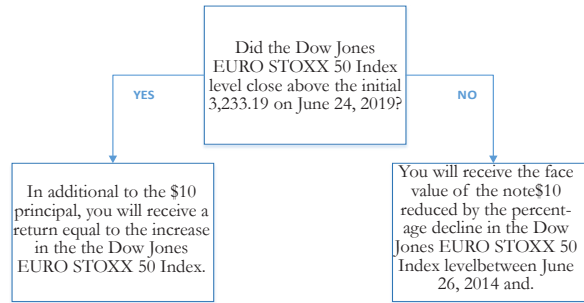

The payoff diagram shows the final payoff of this note given the Dow Jones EURO STOXX 50 Index level (horizontal axis). For comparison, the dashed line shows the payoff if you invested in the Dow Jones EURO STOXX 50 Index directly.

### Principal Payback Table

The Dow Jones EURO STOXX 50 Index	Note Payoff
0.00	\$2.00
323.32	\$3.00
646.64	\$4.00
969.96	\$5.00
1,293.28	\$6.00
1,616.60	\$7.00
1,939.91	\$8.00
2,263.23	\$9.00
2,586.55	\$10.00
2,909.87	\$10.00
<b>3,233.19</b>	<b>\$10.00</b>
3,556.51	\$11.00
3,879.83	\$12.00
4,203.15	\$13.00
4,526.47	\$14.00
4,849.79	\$15.00

### Maturity Payoff Diagram

The contingent payoffs of this Buffered Performance Security.

### Analysis

This Buffered Performance Security pays investors the increase in the Dow Jones EURO STOXX 50 Index, but if the Dow Jones EURO STOXX 50 Index declines over the term of the note, investors will suffer losses equal to the percentage decline in the Dow Jones EURO STOXX 50 Index. In addition, investors bear the credit risk of Deutsche Bank. Investors purchasing this Buffered Performance Security effectively sell at-the-money put options to Deutsche Bank, buy at-the-money call options, and a zero-coupon note from Deutsche Bank. This Buffered Performance Security is fairly priced if and only if the market value of the options investors received from Deutsche Bank equals the market value of the options investors gave Deutsche Bank plus the interest investors would have received on Deutsche Bank’s straight debt.

### Deutsche Bank’s Stock Price

The graph above shows the adjusted closing price of the issuer Deutsche Bank for the past several years. The stock price of the issuer is an indication of the financial strength of Deutsche Bank. The adjusted price shown above incorporates any stock split, reverse stock split, etc.

### Deutsche Bank's CDS Rate

Credit default swap (CDS) rates are the market price that investors require to bear credit risk of an issuer such as Deutsche Bank. CDS rates are usually given in basis points (bps). One basis point equals 0.01%. Higher CDS rates reflect higher perceived credit risk, higher required yields, and therefore lower market value of Deutsche Bank's debt, including outstanding Buffered Performance Security. Fluctuations in Deutsche Bank's CDS rate impact the market value of the notes in the secondary market.

### The Dow Jones EURO STOXX 50 Index Level

The graph above shows the historical levels of the Dow Jones EURO STOXX 50 Index for the past several years. The final payoff of this note is determined by the Dow Jones EURO STOXX 50 Index level at maturity. Higher fluctuations in the Dow Jones EURO STOXX 50 Index level correspond to a greater uncertainty in the final payout of this Buffered Performance Security.

### Realized Payoff

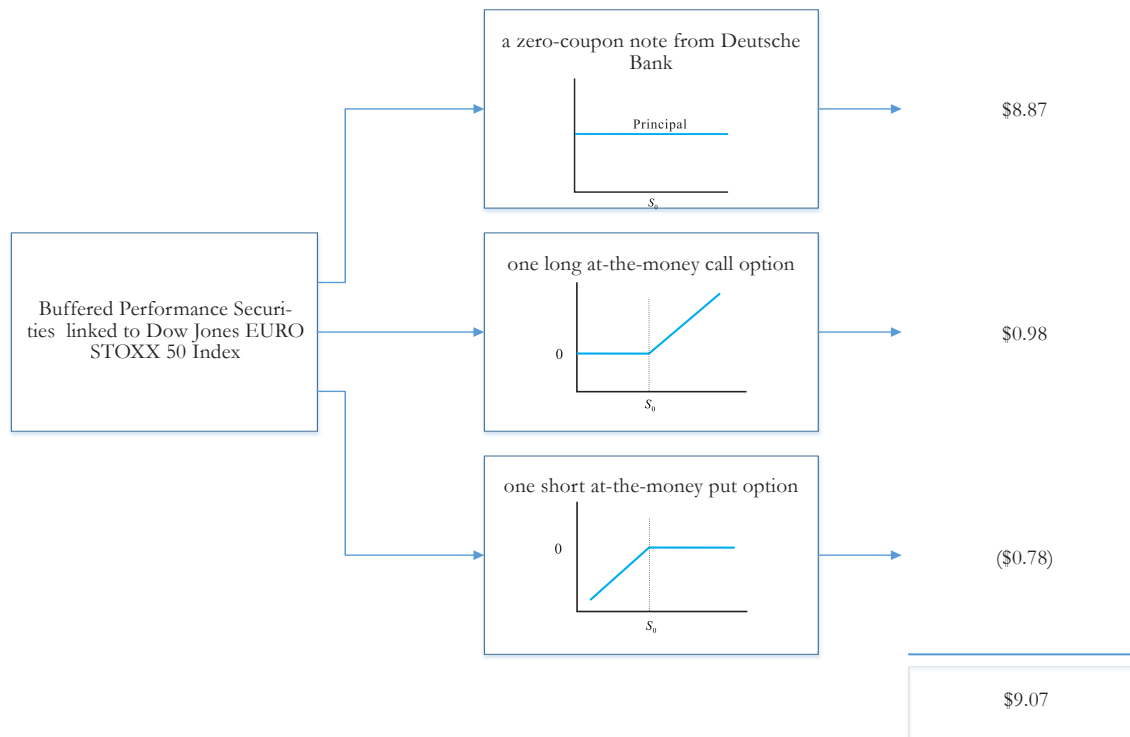

This product will mature on June 28, 2019.

## Reference Asset The Dow Jones EURO STOXX 50 Index's Implied Volatility

The annualized implied volatility of the Dow Jones EURO STOXX 50 Index on June 26, 2014 was 17.93%, meaning that options contracts on the Dow Jones EURO STOXX 50 Index were trading at prices that reflect an expected annual volatility of 17.93%. The higher the implied volatility, the larger the expected fluctuations of the Dow Jones EURO STOXX 50 Index level and of the Note's market value during the life of the Notes.

## Decomposition of this Buffered Performance Security

This note can be decomposed into different components, and each component can be valued separately. The chart above shows the value of each component of this Buffered Performance Security.

1. Delta measures the sensitivity of the price of the note to the the Dow Jones EURO STOXX 50 Index level on June 26, 2014.
2. CDS rates can be considered a measure of the probability that an issuer will default over a certain period of time and the likely loss given a default. The lower the CDS rate, the lower the default probability. CDS rate is given in basis points (1 basis point equals 0.01%), and is considered as a market premium, on top of the risk-free rate, that investors require to insure against a potential default.
3. Fair price evaluation is based on the Black-Scholes model of the the Dow Jones EURO STOXX 50 Index on June 26, 2014.
4. Calculated payout at maturity is only an approximation, and may differ from actual payouts at maturity.
5. Our evaluation does not include any transaction fees, broker commissions, or liquidity discounts on the notes.
